Education

Bachelor of Software Engineering (Honours)

Feb 2022 ~ May 2026

University of Technology Sydney (UTS) – WAM Distinction (6.16 GPA)

Technical Skills

Languages: JavaScript (NodeJS), TypeScript, HTML5/CSS, Python, C++, Java, Dart, PostgreSQL

Frameworks & Tools: React Native, React, Next, Cursor, Claude Code, Three.js, TensorFlow, PyTorch, OpenCV, MediaPipe, Flutter, Redux, RTK Query, Flask, Plasmio, Vue, CapacitorJS, PiniaJS, Vite, Ionic, Algolia, RESTful API.

Experience

DAPPA Junior Frontend Developer | React Native, Typescript, NextJS, Xcode, Plasmio

Feb 2024 ~ July 2025

Summer Hill

- Actively contributed to the initial launch and post development of the DAPPA App on both iOS and Android platforms, and a Chrome Extension product (DAPPA Clip), accumulating over **1,000 registered active users** and recorded just under **5,000 outfit generations** from our built-in DAPPA AI VTON (Virtual Try-On) model **within 4 weeks** after our launch across both products
- Developed **30+ Figma design** screen using **React Native** and **Redux**, after closely collaborating with the UI/UX and consistent implementation of **RESTful APIs** alongside the development team by participating in **weekly agile sprints**.
- Integrated Google Analytics/Tags that monitored **2,000+ metrics** every week on user behaviours and product insights, providing the UI/UX team with data-driven insights into improving Figma designs and user flows.
- Supported **B2B** efforts by developing a **SaaS** marketing website built within a week.

MarketLye (CasePilot) Software Engineer Intern | Vue, JavaScript, Ionic, Firebase, PiniaJS

June 2023 ~ Dec 2023

Ultimo

- Improved performance** by 35% and **reduced memory consumption** by up to 40% after transitioning an **e-commerce admin web** application codebase from **options API** to **composition API** in VueJS for a more optimal and scalable code, and refactored old features/components.
- Participated in collaborative development on **GitHub** through extensive code reviews and engaged in system design meetings with UI/UX team.

Retail/Customer service experiences (6+ years)

- Customer Service Officer – Secure Parking (Sydney Olympic Park)
- Retail Pharmacy Assistant – Priceline Pharmacy (North Parramatta)
- Retail Pharmacy Assistant – Chemist Warehouse (Castle Towers)

Aug 2025 ~ Current

June 2023 ~ Jan 2025

June 2019 ~ June 2023

Projects

Interactive Three.js Portfolio Website | Three.js, Blender, Typescript, React, Vite

Feb 2026

Personal Project

- Built a **low-poly 3D scene** with **Three.js** and integrated **character object collision physics via Octree collision**, **Raycasting for interactable objects**, smooth camera animations, and implemented WASD/Arrow keys camera-relative movement.
- Designed and modelled the entire island environment and character, including its **walking animation**, in **Blender**.

CNN Driver Fatigue Detection System | Python, MobileNetV2, TensorFlow, OpenCV, MediaPipe, Flask

Apr 2026

Engineering Capstone UTS (High Distinction)

- Designed and evaluated a hybrid **deep learning** and **computer vision** system to detect driver drowsiness in real-time on consider-grade hardware, achieving **98.70% test accuracy** and **0.9991 ROC-AUC** across 3,000 evaluation samples.
- Introduced **CLAHE preprocessing** into a **MobileNetV2** pipeline and benchmarked against a baseline model, reducing total misclassifications by **15.22%** and false positive by **84.6%**.

Autonomous Navigation for Hospital Delivery Robots | Python, PyTorch

Apr 2026

Neural Network and Fuzzy Logic UTS (High Distinction)

- Designed and trained a **Mixture-of-Experts (MoE)** policy with two expert branches and a gating network for **autonomous robot navigation** in 2D simulated hospital environment, achieving a **72% success rate against a 59%** for the rule-based expert across **100 evaluation episodes**.

- Implemented a **Multi-Layer Perceptron (MPL)** and **MoE** policies in **PyTorch** via **imitation learning** on filtered expert demonstrations, **reducing collision rate by 11% points** (from 32% to 21%) while preserving trajectory smoothness.

Real Estate CRM Dashboard with ML Lead Generation | *React, JavaScript, Java, Spring Boot, AWS*
Software Development Studio UTS (Distinction)

Mar 2024

- Assigned to collaborate with a **real-world client** to develop an **MVP dashboard designed as a CRM solution tool** for **real estate** companies and agents, with the **integration of our own machine learning model** to generate and prioritise potential leads.
- Led as **Team Lead, Scrum Master, and Full Stack Developer**, facilitating **agile sprints** and client meetings to translate requirements into deliverables with **Jira** as our project tracking tool.
- Collaborated with the ML engineer to **visualise lead generation results** and **model parameters** through interactive data charts using **ChartJS**, while assisted in deploying our **Spring Boot backend** to **AWS Elastic Beanstalk**.

Social Media Ranking Algorithm (BirdFeed) | *Flutter, Dart, Android Studio, Firebase*
Software Innovation Studio UTS (Distinction)

Sep 2024

- Onboarded a startup called WingMate and developed a feature called “BirdFeed”, a **social media feature** for bird enthusiasts that implements a **ranking algorithm** to match users by interest and **deliver personalised feed content**.
- Contributed to translating **Figma design** into **functional MVP screens**, conducting **UX testing**, and resolving relevant bugs to improve user experience.

Industry Certificates

- Microsoft Certified: Azure AI Fundamentals (AI-900) – Issued Jul 2025
